EDUCATION

Southern Alberta Institute of Technology

Bachelor of Technology – Software Development

Calgary, AB

2023-2027 (*in progress*)

EXPERIENCE

Founder & Engineer — [Pulse](#)

An AI-powered desktop assistant startup aiming to reinvent the OS interface through natural language interaction

- Built a cross-platform desktop app using Electron and Node.js with a streaming LLM interface powered by OpenAI and Anthropic APIs
- Engineered native OS integrations including command execution, app launching, and file management via a conversational UI
- Implemented Supabase Auth for user management and a Vercel-hosted backend with real-time response streaming
- Designed screenshot and voice input pipelines for multimodal interaction across macOS and Windows

Avenue Living Residential – Calgary, AB | Software Engineering Intern

Worked with a multidisciplinary team to develop an application for analyzing and consolidating real estate data.

- Built scalable FastAPI and PostgreSQL backends for real-time querying across 1,000+ listings
- Integrated external data sources (Zillow, CoStar) and engineered filtering tools for investment insights
- Led front-end development in React, improving data analysis efficiency by 50%

PROJECTS

WHO Performance Management System

Built the backend for an internal performance management platform deployed for the World Health Organization

- Designed a PostgreSQL schema modeling a 5-tier approval hierarchy with role-based access control
- Implemented a deliverables approval workflow with status transitions and audit trails
- Conducted a formal security audit identifying 6 critical vulnerabilities and resolved them using database-level RPC functions
- Managed schema versioning across 10 sequential Supabase CLI migrations for safe deployment

AI-Powered PDF Editor

Built a web app for AI-assisted PDF editing and document transformation

- Engineered a PDF parsing and rendering pipeline using PDF.js with natural language edit instructions
- Implemented AI-driven form detection and auto-fill, reducing manual document completion time
- Built document storage and session management with Supabase, with client-side export via pdf-lib

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, Swift, C#
- **Web Development:** React, Angular, Node.js, Django, FastAPI, HTML, CSS
- **Tools:** Git, GitHub, Electron, Vision
- **Databases:** Oracle, MySQL, PostgreSQL, Firebase, Supabase
- **Cloud Platforms:** AWS, Google Cloud Platform (GCP)
- **AI/ML:** OpenAI API, Anthropic API, TensorFlow, PyTorch, Core ML

LANGUAGES

- **English** (Native)
- **French** (Native)
