EDUCATION

Southern Alberta Institute of Technology

Bachelor of Technology – Software Development

Relevant Courses: Data Structures, Algorithms, Operating Systems, Databases

Calgary, AB

2023-2027 (*in progress*)

RELEVANT EXPERIENCE

Founder & Engineer — [Pulse](#) Calgary, AB | Jan 2025 – Present

Cross-platform AI-powered desktop assistant startup aiming to reinvent the OS interface through natural language interaction

- Built Pulse from the ground up using **Electron**, **Node.js**, and custom **LLM APIs**, serving as a natural-language system shell
- Designed task automation, file operations, and system controls via a conversational UI powered by **OpenAI** and **Anthropic** models
- Integrated native OS command execution, app launching, file management, and real-time assistant features across macOS and Windows
- Deployed to early testers and iterated based on user feedback, with plans for beta launch via pulseai.dev
- Defined roadmap, branding, and product vision with the goal of building the first truly AI-first OS assistant

Avenue Living Residential – Calgary, AB | Software Engineering Intern

Worked with a multidisciplinary team to develop an application for analyzing and consolidating real estate data.

- Developed a **full-stack** real estate data platform in a multidisciplinary team
- Built scalable **FastAPI** and **PostgreSQL** backends for real-time querying across 1,000+ listings
- Integrated external data sources (Zillow, CoStar) and engineered smart filtering tools for investment insights
- Led front-end development in **React**, improving data analysis efficiency by 50%
- Gained production-level experience in API design, real-time systems, and cross-functional development

PROJECTS

WHO Performance Management System

*Built the backend for an internal performance management platform deployed for the **World Health Organization***

- Designed a PostgreSQL schema modeling a 5-tier approval hierarchy with role-based access control
- Implemented a deliverables approval workflow with status transitions and audit trails
- Conducted a formal security audit identifying 6 critical vulnerabilities and resolved them using database-level RPC functions
- Managed schema versioning across 10 sequential Supabase CLI migrations for safe deployment

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, Swift, C#
- **Web Development:** React, Angular, Node.js, Django, FastAPI, HTML, CSS
- **Tools:** Git, Github, Electron, Tensorflow, Pytorch, Core ML, Vision
- **Databases:** Oracle, MySQL, PostgreSQL, Firebase
- **Cloud Platforms:** AWS, Google Cloud Platform (GCP)

LANGUAGES

- **English** (Native)
- **French** (Native)
